

Simply Better Data Protection Reporting

A Complete Monitoring Platform To Reduce Overhead, Cost & Risk

Because you can't manage what you can't measure.

Backup Operations Monitoring

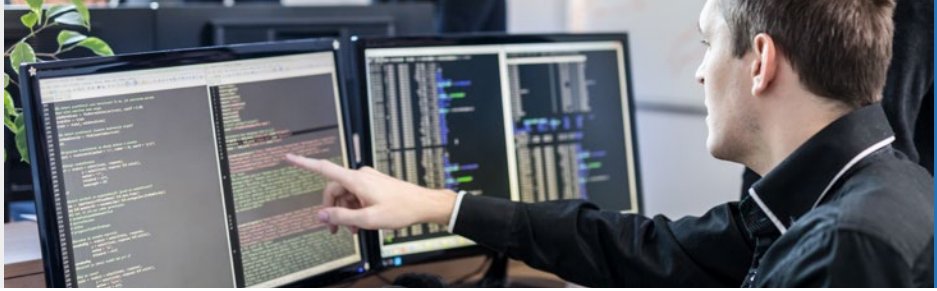

Make manual backup reporting a thing of the past with Bocada's automated backup operations monitoring solution. Bocada aggregates and normalizes metadata from all major cloud and on-prem backup tools, compiling data into ready-to-use reports - and keeping it for future reference and reporting. You'll be able to track backup and recovery performance trends, oversee in-progress jobs, and optimize troubleshooting in one unified tool. With built-in job failure-alerting and ticketing systems integrations, you can cut down on tedious work while keeping ahead of critical data protection elements.

Independent Compliance, Audit & SLA Tracking

Save hundreds of hours of manual work each year with Bocada's automated auditing, compliance, and SLA tracking capabilities. With our single-pane portal, you'll be able to produce backup job performance documentation covering any period, geography, server group or backup product in minutes across your hybrid-cloud environment. Save pre-configured report templates, schedule them to run at your desired cadence, and automatically distribute them to key stakeholders to demonstrate regulatory and SLA compliance. You can even grant access to auditors to take audit reporting off your to-do list.

Systems & Storage Oversight

Optimize your IT budget with total visibility over your backup environment. Built-in, automated reporting on storage trends and capacity usage eliminate storage-related fire drills. You get crystal clear direction on how best to free up unused capacity as well as data-supported approaches to deciding when to invest in additional storage... all while your team and budget get leveraged for higher-value projects.

FEATURE SUMMARY

- ▶ Agentless, single-pane reporting service
- ▶ 15+ backup products supported
- ▶ 60+ customizable report templates
- ▶ Executive summary dashboard
- ▶ Ticketing systems integration (e.g. ServiceNow)
- ▶ Automated reporting and distribution
- ▶ Historical backup performance reporting
- ▶ Historical recovery reporting
- ▶ In-progress backup job activity reporting
- ▶ Capacity and storage trends
- ▶ SLA, KPI & compliance tracking
- ▶ Chargeback reporting
- ▶ VM detection and protection monitoring
- ▶ Annotations for remediation and resolution
- ▶ Real-time alerting
- ▶ Configurable client and server groupings
- ▶ User and product activity tracking
- ▶ Role-based access control (RBAC)
- ▶ LDAP integration
- ▶ Open database for direct SQL access

TECHNICAL REQUIREMENTS

- ▶ Windows Server
- ▶ SQL Server
- ▶ IIS
- ▶ Data collection requirements vary by backup product

SUPPORTED TECHNOLOGIES

Cloud

- Cohesity
- Druva
- Rubrik
- Spectrum Protect Plus
- Azure
- Veeam

On Premises

- Commvault
- EMC Avamar
- EMC Networker
- IBM Spectrum Protect
- Netbackup
- RMAN
- Arcserve
- Backup Exec
- Data Protector (MicroFocus)
- Microsoft DPM
- NetApp ONTAP
- vRanger
- Manual (CSV)

Storage and Virtualization

- Data Domain
- Virtual Machines
- Cloud
- Disk & Tape
