

Automated Backup Monitoring for MSPs & Enterprise IT

A data protection monitoring platform to control your complex IT operations

Master Backup Operations

Make manual backup oversight a thing of the past with Bocada's automated backup monitoring solution. Bocada aggregates and normalizes metadata from all major cloud and on-prem backup tools, compiling data in one central dashboard. Track past and current backup performance trends with built-in, highly configurable reports. Save preconfigured report templates, schedule them to run at your desired cadence, and automatically distribute them to key stakeholders to stay on top of backup activity.

Automate Compliance & SLA Reporting

Reduce risk while saving hundreds of labor hours each year with Bocada's automated compliance oversight and tracking. Produce backup performance and audit reports for any period, geography, server group, or backup product in minutes across your on-prem or cloud environment, all under a single pane. Automate email distribution to auditors and compliance officers to reduce distractions and ad hoc requests. You get a wholly independent verification process to simplify compliance and SLA tracking, unify data, and prove you met key requirements.

Protect Critical Resources

Never be left wondering if critical assets are unprotected, or if storage cost overruns are about to happen. Bocada's automated ticketing integration, cloud asset and CMDB inventory validation, customizable alerts, and storage forecasting will simplify workstreams and take you from reactive management to proactive control, all while optimizing your backup and storage assets to their fullest.

FEATURE SUMMARY

- ▶ Agentless, automated, single-pane monitoring
- ▶ Over 30 cloud + on-prem backup products supported
- ▶ 60+ customizable report templates
- ▶ Executive summary dashboard
- ▶ Automated report creation and distribution
- ▶ Historical backup performance reporting
- ▶ Historical recovery reporting
- ▶ In-progress backup job activity reporting
- ▶ Capacity and storage usage reporting
- ▶ Storage trends and forecasting
- ▶ SLA, KPI & compliance tracking
- ▶ Ticketing systems integration
- ▶ VM detection and protection monitoring
- ▶ CMDB integration and asset validation
- ▶ AWS & Azure asset protection reporting
- ▶ Critical failure and storage spike alerting
- ▶ Annotations for remediation and resolution
- ▶ Configurable client and server segmenting
- ▶ User and product activity tracking
- ▶ Role-based access control (RBAC)
- ▶ Active Directory authentication
- ▶ Open database for direct SQL access

TECHNICAL REQUIREMENTS

- ▶ Windows Server
- ▶ SQL Server
- ▶ IIS
- ▶ Data collection requirements vary by backup product

SUPPORTED TECHNOLOGIES

Cloud & SMB Applications

- Acronis Cyber Protect
- AWS
- Azure Cloud
- Cohesity
- Druva Phoenix
- LiveVault
- N2WS / CPM
- Rubrik
- Spectrum Protect Plus
- Veeam

Enterprise Applications

- Arcserve
- Avamar
- Azure Backup Server
- Backup Exec
- Commvault
- Data Protector
- Microsoft DPM
- Netbackup
- Networker
- RMAN
- Spectrum Protect
- vRanger
- Manual (CSV)

Storage Appliances

- Data Domain
- StoreOne
- NetApp

Endpoint Applications

- Druva inSync
- MS SQL
- Veeam O365

Ticketing & Inventory Systems

- Remedy / BMC Helix
- ConnectWise
- Jira
- ServiceNow
- MicroFocus Service Manager
