

BACKUP MONITORING, SIMPLIFIED

A single dashboard for automated backup operations oversight, asset protection, and compliance reporting.

Backup Monitoring & Reporting

Track past and current backup performance trends with built-in, highly configurable reports. Save preconfigured report templates, schedule them to run at your desired cadence, and automatically distribute them to key stakeholders to stay on top of backup activity.

Asset Protection

Safeguard valuable resources across your IT environment with automated unprotected asset discovery, failure alerting, and unusual backup behavior detection. Stay one step ahead of issues impacting data restorability with zero incremental labor hours.

Compliance Oversight

Create backup performance and audit reports for any period, geography, server group, or backup product in minutes across your on-prem or cloud environments. Enjoy a wholly independent solution to show auditors that you meet key data protection metrics.

Workflow Automation

Remove tedious, manual touchpoints out of your remediation workflows with automated failure ticketing and built-in issue identification features. Fix backup failures faster and get key resources protected in no time.

FEATURE SUMMARY

- ▶ Agentless, automated, single-pane monitoring
- ▶ Over 40 cloud + on-prem backup products supported
- ▶ 60+ customizable report templates
- ▶ Executive summary dashboard
- ▶ Automated report creation and distribution
- ▶ Historical backup performance reporting
- ▶ Historical recovery reporting
- ▶ In-progress backup job activity reporting
- ▶ Capacity and storage usage reporting
- ▶ Storage trends and forecasting
- ▶ SLA, KPI & compliance tracking
- ▶ Ticketing systems integration
- ▶ VM detection and protection monitoring
- ▶ Asset inventory integration and asset validation
- ▶ AWS & Azure asset protection reporting
- ▶ Critical failure and storage spike alerting
- ▶ Annotations for remediation and resolution
- ▶ Configurable client and server segmenting
- ▶ User and product activity tracking
- ▶ Role-based access control (RBAC)
- ▶ Active Directory authentication
- ▶ Open database for direct SQL access

TECHNICAL REQUIREMENTS

- ▶ Windows Server
- ▶ SQL Server
- ▶ IIS
- ▶ Data collection requirements vary by backup product
